

YORK Container Mk3

The new York Container Mk 3 shown below is an updated version of the existing York container. The new containers are designed to carry out the same duties as the current units with no changes to the operating practices.

New Mk3 Design

Existing Mk2 Design

The tare weight of the container has been reduced to 40 kg, it's capacity remains unchanged at 250 kg, up to 28 letter trays.

The surface of the metal framework is a bright smooth finish

The elasticated straps are closed and released as on the current York. The strap end fixings are attached to the front of the container for ease of maintenance. The straps are not interchangeable between the existing and new containers.

The operation of the brake is the same as on the current York. The manoeuvring handles are fitted with plastic covers.

Both the existing and new design of container can be nested together, both ways around. The new container is nested and assembled the same way as the existing unit. Existing ALPS sleeves and other accessories fit the new container
