

State-By-State Breakdown: COVID-19 Testing Positivity Rates Among The General Population

On July 22, 2020, the Centers for Medicare and Medicaid Services [announced](#) that, “CMS will begin requiring, rather than recommending, that all nursing homes in states with a 5% positivity rate or greater test all nursing home staff each week.” If implemented today, **11,640 nursing homes** would be required to conduct such weekly testing.

“Governors and state health agencies in these 33 states need to take immediate action to protect nursing homes by ensuring facilities have adequate supplies of PPE (including N95 masks), putting pressure on lab companies in their states to expedite test results for our residents and caregivers, and mandating all residents of their state wear masks in public to help reduce the spread of COVID in the surrounding communities.”

State-By-State Breakdown: Percent Of Nursing Homes With Less Than One Week Supply Of PPE And COVID-19 Testing Positivity Rates Among The General Population

CMS Data: Percent of nursing homes without one-week supply of various PPE.

This [data](#), released July 30, 2020 by the Centers for Medicare & Medicaid Services (CMS), is from required federal reporting by nursing homes across the country on current supply of PPE (N95 Masks, Surgical Masks, Gowns).

“The continued shortage of vital PPE supplies for nursing homes across the U.S. is a major concern especially for states with recent spikes in new COVID cases.”
